

ABDUL MOIZ

ARTIFICIAL INTELLIGENCE & DATA SCIENCE ENTHUSIAST

Email: abdulmoizdev01@gmail.com

Phone: +92 3338270932

Location: Hyderabad, Pakistan

SUMMARY

Highly motivated Artificial Intelligence undergraduate with practical experience in building end-to-end Machine Learning pipelines. Specialized in data preprocessing, feature engineering, predictive modeling, and deploying interactive AI dashboards to solve complex data challenges.

TECHNICAL SKILLS

Languages & Core

- Python (OOP, Scripting)
- Pandas & NumPy

Machine Learning & AI

- Scikit-Learn & XGBoost
- Supervised Learning
- Collaborative Filtering
- Hyperparameter Tuning

Visualization & BI

- Matplotlib & Seaborn
- Exploratory Data Analysis

Deployment & Tools

- Streamlit Applications
- Jupyter & Google Colab
- Git & GitHub Workflows

EDUCATION

BS in Artificial Intelligence

Mehran University (MUET) | 2023 — 2027

Core: Machine Learning, Advanced Data Structures, Algorithms, RDBMS.

Intermediate in Computer Science

Muslim Degree College | 2021 — 2023

LANGUAGES

- English (Professional Working)
- Urdu (Native)

MAJOR PROJECTS & EXPERIENCE

ShopSphere AI Super App (End-to-End E-Commerce ML Dashboard)

Machine Learning Developer | Python, XGBoost, Pandas, Streamlit Completed

- Data Processing & Cleansing:** Cleaned and processed raw multi-table transactional datasets (Customers, Products, Orders); resolved orphaned entity joins using Left Joins and statistical median/mode imputation.
- Feature Engineering:** Formulated domain-centric feature sets including Recency, Frequency, Monetary (RFM) metrics, temporal rolling averages, time-series lags, and customer interaction dynamics.
- Sales Forecasting Engine:** Developed an XGBoost Regressor to predict daily revenue trajectories; optimized model hyperparameters via GridSearchCV to substantially minimize Mean Absolute Error (MAE).
- Customer Churn Classifier:** Trained an XGBoost Classifier on historic purchase behavior, reaching a **73% recall rate** on identifying high-probability churn risks.
- CLV & Recommendation Systems:** Integrated Customer Lifetime Value regression with Item-Based Collaborative Filtering (Cosine Similarity) for dynamic "Frequently Bought Together" product cross-selling.
- Interactive Production Dashboard:** Bundled all 4 predictive algorithms into a unified, low-latency web dashboard deployed on **Streamlit**.

Exploratory Data Analysis (EDA) & Business Intelligence

Data Analytics Pipeline | Python, Seaborn, Matplotlib Completed

- Conducted multi-tiered **ABC Inventory Analysis** to segregate high-yield revenue drivers from low-velocity catalog SKUs.
- Synthesized automated visualization workflows (correlation heatmaps, cohort distributions, scatter plots) to quantify consumer purchase spikes during weekend and post-payday transaction windows.
- Extracted actionable business signals to guide stock replenishment schedules, dynamic discount timing, and product mix strategies.
